

Master ISO

CD-R Writing

Asimware Innovations is proud to present **MasterISO**. This professional program allows the user to control a CD-ROM recorder in order to create custom CD-ROM and CD-Audio discs. **MasterISO** offers the power to meet all CD recording needs in an Amiga specific package.

The **MasterISO** software package includes an advanced ISO 9660 build utility which allows the user to create a universally compatible CD-ROM volume.

Options are provided to give the user control over every aspect of the ISO 9660 volume. Amiga specific support also allows for long filenames, special characters, CDTV and CD³² auto-booting¹.

CD-Audio discs can be created with **MasterISO**. Digital audio data can be sourced from 16-bit CDDA, MAUD or AIFF audio files. CD-Audio discs are formatted to the Red Book standard and offer universal compatibility with standard CD players.

All aspects of MasterISO are controlled through a powerful graphical interface.

MasterISO Technical Highlights

- Creates ISO 9660 compatible volumes.
- Handles ISO 9660 Level 1 and Level 2 filenames.
- Files can be taken from multiple sources and combined into a single volume.
- Generates volume image to a DOS file or direct to a SCSI hard drive.
- Uses AIFF, MAUD and CDDA 16-bit audio files.
- **MasterISO** requires the following:
 - Workbench 3.0, or higher;
 - compatible SCSI controller;
 - 1.3 GB of HD space;
 - 16 MB of RAM.
- **MasterISO** supports the following:
 - Yamaha CDR100;
 - Pinnacle RCD-202;
 - Philips CDD-521, CDD-522.

¹ Requires appropriate Commodore developer license.
